Project summary

- The idea of the project is to provide ability for users to track their payments.
- You can create custom payment categories
- You add *subscriptions*, monthly payments that will be added automatically
- Create collaborative *ledger* with other users

Technologies used

- Client side
  - React
  - React Router
  - axios
- Server side
  - Node.js
  - Express.js
  - Mongoose
  - bcrypt
  - jsonwebtoken
  - Inversify
- Database
  - MongoDB with Mongoose

Problems

- Underestimated the difficulty of project and due to time constraints had to cut on some of the functionalities like:
  - *Subscriptions*
  - Collaborative *ledgers*

What's next?

- Implement the cut functionalities
- Improving GUI
- Increasing the level of security, i.e. 2FA

Thank you
